Warranty

There is a 1+1 year warranty against technical defects. The warranty is strictly limited to the exchange of defective parts. Dropped devices or broken tips are not under warranty. Other claims for damages such as loss of working hours, incorrect treatment and their consequences, non-executed after treatment and their consequences as well as the non-observance of the safety instructions are excluded from all warranty and liability.

Warranty claims:

Since all our products are certified according to CE and registered with FDA, all warranty claims are to be registered according to specific regulations. All Warranty claims must follow the "Warrant Claim" form that can be downloaded from <http://www.cryoiq.com/warranty>. Please notice that the end-user invoice has to be attached to the Warranty Claim.

Calculating your net price

Use the attached discount table to calculate your NET prices. Note that the products are grouped into 4 discount groups A, B, C, D. You will find the corresponding groups and discounts in the discount table.

OxiBlock® New!

The new OxiBlock® coating on the inside of the cartridge gives you a contamination-free environment for the gas. With this technique, we are the first brand that can offer you a cartridge that meets the new upcoming Medical Device Directive. What we have seen is that without our coating it is not possible to obtain a contamination free surface inside. This effects the durability and purity of the gas.

Warranty PLUS New!

With the meticulous control of all production steps of the gas cartridges, we are able to offer you, that if any faults in the devices from CryoIQ® or Cryoalfa® appears caused by use of CryoIQ® gas cartridges we will replace the unit with a new equal CryoIQ® device. Just remember it is important that you follow the cleaning instructions in our User Guide.

Filling New!

All of our cartridges are filled in-house. We have put a lot of efforts in developing a unique gas filling station that has the latest technique to optimize filling of cartridges. To establish a more precise and clean filling process, the filling station itself is equipped with nine separate 5 micron gas filters to ensure 100% purity. With our in-house filling process, we have 100% traceability of the gas used in our cartridges.

It was important for us to find an independent solution where we could fill and refill our cartridges. We have a close cooperation with Praxair who is our consultants and manufacturer of medical gas, but more importantly, we have the in-house knowledge. Today we have in our production two filling stations and are now looking for a fully automated filling line, with a capacity of more than 500 gas cartridges per day to meet future demands.

Medical gas New!

With our filling process, we can ensure that the medical gas we use is kept 100% clean during the entire filling process. We have seen not only once but several times that medical gas is filled in cartridges under conditions that does not fulfil medical standards, which renders the usage of medical gas pointless.

Cap New!

The fine and precise thread in the valve requires a precise cap to seal completely. Our new cap construction is in fine metal and it has its own sealing to ensure an even better shelf life for the cartridges. The previous solution was a combination of a plastic cap with a small plastic stopper that was placed inside the valve. In some cases we noticed that the cap did not seal properly. It also happened that the inner plastic stopper was forgotten to be removed when installing the device, which caused damages on the devices and a lot of frustration.

Shelf Life New!

Together with our gas manufacturer, Praxair, we have implemented a Just-In-Time system so that we can always offer you as our dealer the best shelf life for your gas cartridges. From the production day of the gas the durability is 3 years and with our system we never have gas older than 1 month in our production.

What we have seen before is that larger batches of production results in shorter shelf time for the gas cartridges. With our Just-In-Time system we have adjusted our production so that we never needs to build unnecessary stock. This system is also very cost effective which enables us to keep our prices on a low level.
